Applicant's arguments with respect to claims 1-30 are have been considered but are moot in view of the new ground(s) of rejection.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Slattery et al (6514085) in view of Johnston et al (2002/0103882). Slattery discloses a computer implemented method for evaluating a user's information technology skills by having the user complete a practical exercise that is associated with one or more machines. Slattery discloses displaying to the user information that is associated with the practical exercise, wherein the information describes a task that the user is instructed to complete, and wherein the user uses one or more of the machines to complete the task, and launching the one or more machines so that the user can use the machines to perform the task. Johnston et al discloses a computer implemented method for evaluating a user's information technology skills by having the user complete a practical exercise that is associated with one or more "virtual" machines. It would have been obvious to one of ordinary skill in the art for the machines disclosed by Slattery et al to be the virtual machines disclosed by Johnston. See Fig. 14 A (Details) regarding the use of a time requirement for an exercise. See Col. 11 discusses examining the state into which the user put one or more of the machines and comparing to a benchmark. It would have been obvious to one of ordinary skill in the art that any

IT training task could be supported using the systems of Slattery and Johnston, the specific task of modifying a particular file stored within a disk image file not being limiting over the prior art.
